**Trustworthy
Tyre Inflation
for a continuous
Journey.**

TYRE RAKSHAK

**INDIA'S 1ST AUTOMATIC TYRE
DEFLATION & INFLATION SYSTEM**

W

TRUSTWORTHY TYRE INFLATION FOR A CONTINUOUS JOURNEY.

HOW ATDIS WORKS

Air is directed from the trailer air supply to a central control box, and then through each axle. The axles work as channels, directing air via a wheel isolator through a rotary union assembly to supply individual tyres as needed.

- Cost efficiency is crucial for those involved in transporting goods.
- Smart managers understand the importance of monitoring aspects like mileage, fuel consumption, tread wear, and downtime.
- Operating with under inflated and overinflated tyres can have a significant impact on cost-related factors.

Effects of Over and Under inflation:

- Reduced tyre tread life
- Lower fuel economy
- Tread separation (blowout)
- Roadside service calls

BENEFITS

1. ATDIS (Automatic Tyre Pressure Management System) utilizes your trailer's existing air supply.
2. Ensures optimal tyre inflation while the vehicle is in operation.
3. Cost-saving feature for businesses.
4. Contributes to enhancing profitability.

AUTOMANTIC TYRE DEFLATION & INFLATION SYSTEM (ATDIS) BENEFITS

Extends Tyre Life

Improves Safety

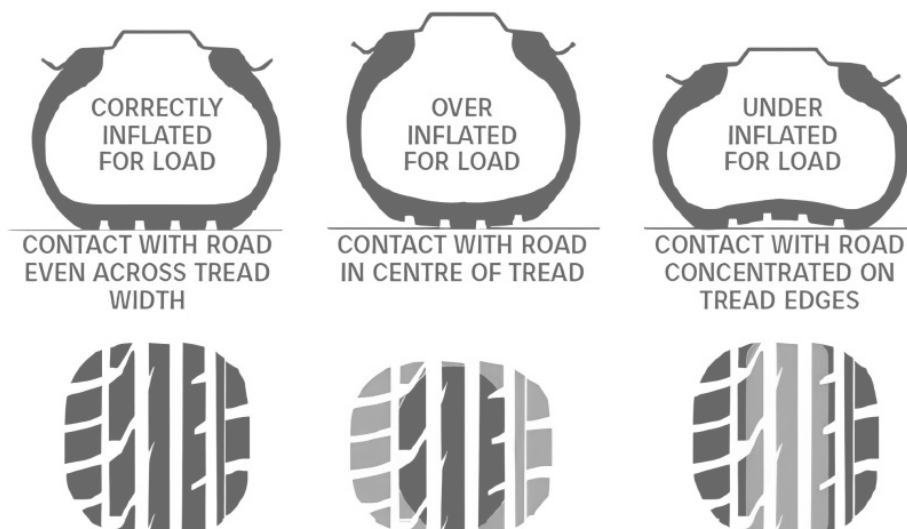

More Fuel Efficient

Saves Downtime Hours

TYRE FOOTPRINT AT 150 PSI VS. 180 PSI VS. 120 PSI

INSTALL ATDIS FOR IMMEDIATE SAVING

- **Swift ROI:** ATDIS provides the opportunity for a return on investment in just under one year.
- **Effortless Installation:** The system's easy retrofitting ensures a straightforward installation process.
- **Critical tyre Maintenance:** Even the most fuel-efficient tyres are susceptible to wear and tear without continuous inflation.

ADVANTAGES FOR YOU

When you need continuous tyre savings, don't miss any of these exclusive ATDIS advantages:

- Automatic inflation system – not a passive monitoring system – that does not require driver intervention.
- Easy to retrofit, since no air lines run through the axle Installation is fast, easy and inexpensive.
- Low maintenance, with only one moving part.

TYPICAL FLEET ROI

FLEET DETAILS

Vehicle Type	Eicher 6055 4x2
Trailer Type	3 Axle York 54 M.T.
Monthly Average Running	8,000 kms
Loaded Quantity	35 M.T.
Current Tyre Life	80,000 kms
Fleet Fuel Average	2.9 kmpl
Fuel Cost	89.5
Tyre Cost	₹25,000

SAVINGS TO CUSTOMERS

Tyre Saving/ Year	₹57,600
Fuel Saving/ Year	₹44,400
ROI on Tyre Rakshak	4.7 Months

OTHER BENEFITS

- Truck efficiency increased by 3.5%.
- No enroute inflation/deflation required on additional cost.
- Tyre heating reduced, thus running increased.

W

VEHICLE SAFETY-A NEW STANDARD

Safe From BLOWOUTS

- Blowouts result from overinflation and bad upkeep of tyres due to over, under and uneven inflation.
- Blowouts result in instability of truck during high-speed driving.
- Tyre blowout chances are reduced by 85%

Safe from PUNCTURES

- In the event of minor punctures, the driver is alerted by a blinker in the cabin, and the system maintains pressure.
- The vehicle can continue driving with optimal Tyre inflation until reaching the workshop.

Safe from OVERINFLATION

- To save fuel, driver overinflates tyre leading to compounding problems.
- The system locks out manual inputs from driver so that the tyre is not overinflated or underinflated.

Safe from TYRE SKIDS

- Tyres skid on the road when they are overinflated, resulting in less-than-optimal braking distance. Accidents such as these are common sight on our roads.
- By maintaining the optimum tyre inflation, the contact patch is increased between road and tyre and chances of skids are reduced by 40%.

Safe from UNEVEN PRESSURE

The system provides a blinker to the driver, making sure they are always aware of the condition of their tyres. Many times drivers keep on driving leading to accidents when there are minor leakage in the tyre which are not noticeable.

WHEEL ALIGNMENT SERVICES FOR TRUCKS & TRAILERS

Maximise Efficiency, Minimize Costs

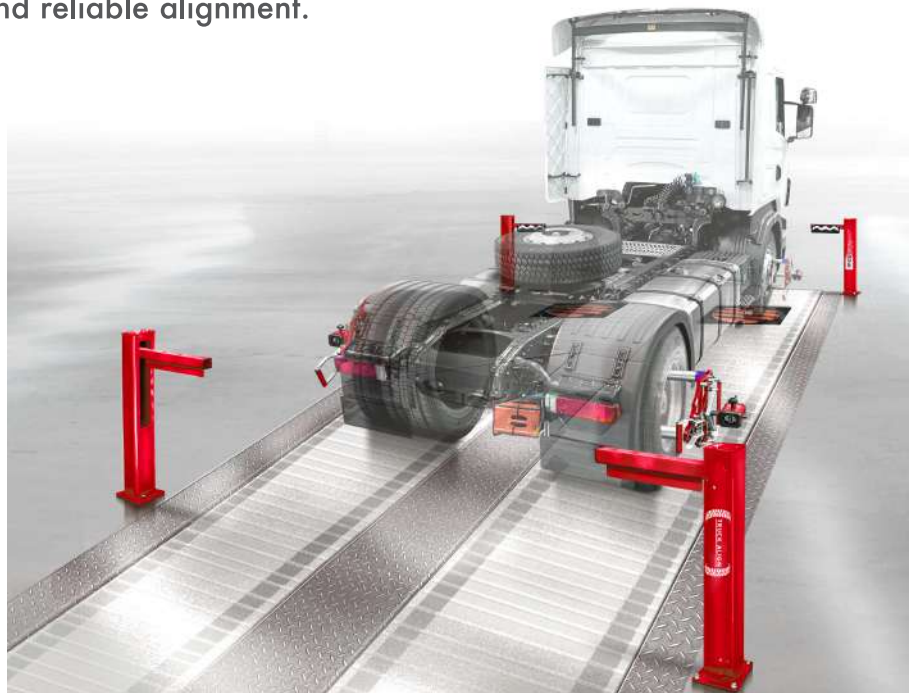

With the expertise of our key partner, TruckAlign, we offer top-tier wheel alignment services specifically designed for trucks and trailers. Together, we ensure your fleet operates at peak performance.

Key Benefits:

- **Enhanced Fuel Efficiency:** Proper alignment reduces rolling resistance, leading to significant fuel savings.
- **Extended Tyre Life:** Avoid uneven tyre wear and prolong the life of your tyres with our precise alignment services.
- **Improved Safety:** Ensure better vehicle stability and control, especially under heavy loads.
- **Reduced Maintenance Costs:** Prevent costly repairs by addressing alignment issues early.
- **Expert Technicians:** Our team, supported by TruckAlign's cutting-edge technology, delivers accurate and reliable alignment.

WHY CHOOSE US?

With TruckAlign's support, we cater to all commercial vehicle types, from single trucks to entire fleets. Trust our specialists to keep your vehicles running smoothly, safely, and efficiently.
